

## California Incensecedar

### *Calocedrus decurrens*

<b>Common name</b>	California Incensecedar
<b>Scientific name</b>	<i>Calocedrus decurrens</i>
<b>Family</b>	Cupressaceae
<b>Ithan Valley Park GPS coordinates</b>	40 00.765N,75 21.344W
<b>Native range</b>	Western North America
<b>Leaves</b>	Green flattened sprays. Scale-like leaves 2–15 mm long; they are arranged in opposite decussate pairs
<b>Flowers</b>	None
<b>Bark</b>	Cinnamon, orange-brown weathering grayish, smooth at first, becoming fissured and exfoliating in long strips on the lower trunk on old trees.
<b>Additional Information</b>	The common name is derived from the incense-like fragrance given off when the leaves are crushed. Because this is not a true cedar, the name is not separated
